The issue is not to read *proof* of the negative effects of chlorine, but simply learn about the effects of chlorine in the water in order to make an informed decision of leaving chlorine in your water against the cost of its removal.

Leonardo da Vinci's Vitruvian Man

Our society has benefited in many positive ways from chlorine water treatment over the past 100 plus years. For one, life expectancy has been extended for the masses. However, with stunning knowledge and insight available today, it isn't necessary to leave chlorine in the water and suffer the effects at our present cancer rate; one out of two women and one out of three men. We're talking about "quality of life without chlorine-induced cancer."

We honor those who say that the proof of cancer from chlorine is not conclusive. It is NOT our intent to do "fear marketing." We are simply providing search reference sites to assist people in making an informed decision from their own research. They could then choose to treat water in a manner that in their minds, meet their needs, desires, and budget over what they are now required to have without being informed.
